COUNTRY BRIEF · NOVEMBER 2026

Guinea: grid and electricity access

Mission 300 compact country

9.7 M
people live without night-time light, a proxy for no power

83%
of them live within 15 km of a power line

10,400
km of mapped and predicted power lines, all voltages

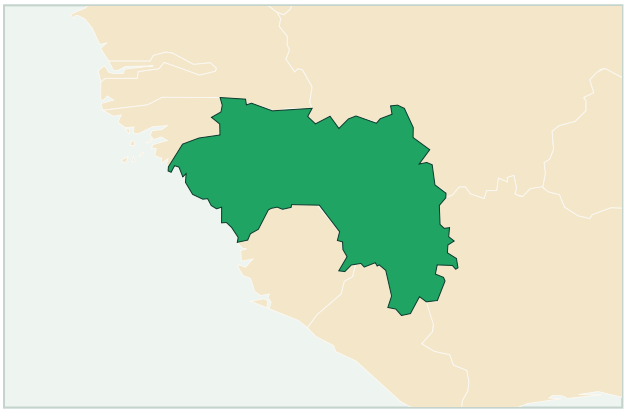

53%
electricity access, as stated in the compact (2024)

100%
access target in the Mission 300 compact (2030)

About 9.7 million people in Guinea live where satellites see no electric light at night, and 83% of them live within 15 km of a power line. This page brings together what our grid-edge screening and Guinea's Mission 300 energy compact say about who still needs power, how close the grid is and what the country has committed to.

WHAT THIS MEANS

To reach 100% electricity access by 2030, Guinea needs to add about 8 percentage points a year from 2024: from 53% today.

NEAR THE GRID, NOT ON IT

About 9.7 million people in Guinea, roughly 75% of the population, live where satellites see no electric light at night. Of them, 83% live within 15 km of a mapped or predicted power line: 2.9 million within 2 km, 5.1 million 2 to 15 km away, and 1.7 million farther out. The largest group lives 2 to 15 km out: close enough to plan for the grid, too far for a quick connection. That is where mini-grids built to join the grid later can do the most good.

Within 2 km of a line: **2.9 million** (30%)
2 to 15 km: **5.1 million** (53%)
More than 15 km: **1.7 million** (17%)

"Without night-time light" is a satellite proxy, not a measured access rate.

THE GRID TODAY

Gridfinder, which combines OpenStreetMap lines with medium-voltage lines predicted from night-time lights, maps about 10,372 km of existing and likely power lines in Guinea. That includes lower-voltage distribution lines, so it is not comparable with the high-voltage totals on our grid-atlas country pages. We have not yet built a detailed grid atlas for this country.

People without night-time light, by distance to a line

Distance	Million people	Share
Within 2 km of a line	2.91	30%
2 to 15 km	5.13	53%
More than 15 km	1.70	17%
Total	**9.74**	**100%**

MISSION 300 COMPACT

Guinea's Mission 300 energy compact commits to raising electricity access from 53% to 100% by 2030. New access is planned as 71% grid, 10% mini-grids and 19% standalone solar.

Electricity access

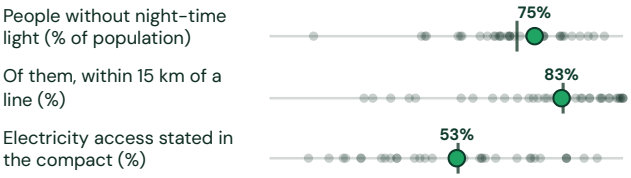

Now: **53%** (2024) Target: **100%** (2030)

Mission 300 energy compact

Commitment	Value
Planned split of new access	grid 71%, mini-grids 10%, standalone solar 19%
Clean cooking target	from 12% to 35% by 2030
Private investment sought	US$7.6 billion
Rules for mini-grids when the grid arrives	Yes
E-waste commitment	No

HOW IT COMPARES

Each dot is one country with a page on aloeenergy.org; the line marks the median. Positions only, no ranking.
