COUNTRY BRIEF · NOVEMBER 2026

Liberia: grid and electricity access

Mission 300 compact country

3.6 M
people live without night-time light, a proxy for no power

79%
of them live within 15 km of a power line

3,100
km of mapped and predicted power lines, all voltages

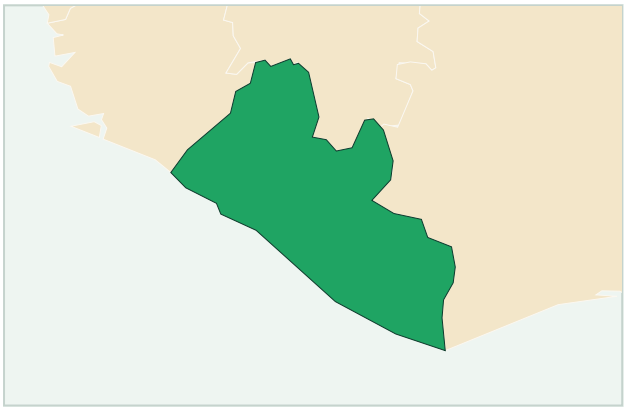

33%
electricity access, as stated in the compact

75%
access target in the Mission 300 compact (2030)

About 3.6 million people in Liberia live where satellites see no electric light at night, and 79% of them live within 15 km of a power line. This page brings together what our grid-edge screening and Liberia's Mission 300 energy compact say about who still needs power, how close the grid is and what the country has committed to.

WHAT THIS MEANS

1.7 million people without power live 2 to 15 km from a line: close enough to plan for the grid, too far for a quick connection.

NEAR THE GRID, NOT ON IT

About 3.6 million people in Liberia, roughly 78% of the population, live where satellites see no electric light at night. Of them, 79% live within 15 km of a mapped or predicted power line: 1.1 million within 2 km, 1.7 million 2 to 15 km away, and 762,000 farther out. The largest group lives 2 to 15 km out: close enough to plan for the grid, too far for a quick connection. That is where mini-grids built to join the grid later can do the most good.

Within 2 km of a line: **1.1 million** (31%)
2 to 15 km: **1.7 million** (48%)
More than 15 km: **762,000** (21%)

"Without night-time light" is a satellite proxy, not a measured access rate.

THE GRID TODAY

Gridfinder, which combines OpenStreetMap lines with medium-voltage lines predicted from night-time lights, maps about 3,090 km of existing and likely power lines in Liberia. That includes lower-voltage distribution lines, so it is not comparable with the high-voltage totals on our grid-atlas country pages. We have not yet built a detailed grid atlas for this country.

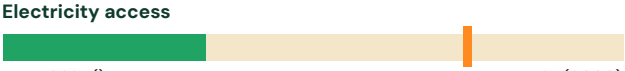

People without night-time light, by distance to a line

Distance	Million people	Share
Within 2 km of a line	1.09	31%
2 to 15 km	1.71	48%
More than 15 km	0.76	21%
Total	**3.56**	**100%**

MISSION 300 COMPACT

Liberia's Mission 300 energy compact commits to raising electricity access from 33% to 75% by 2030. New access is planned as 60% grid, 15% mini-grids and 25% standalone solar.

Electricity access

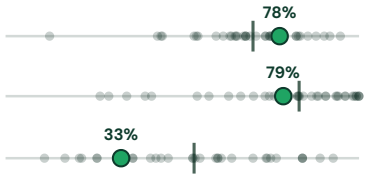

Now: **33%** () Target: **75%** (2030)

Mission 300 energy compact

Commitment	Value
Planned split of new access	grid 60%, mini-grids 15%, standalone solar 25%
Private investment sought	US$0.15 billion
Rules for mini-grids when the grid arrives	Mentioned only
E-waste commitment	No

HOW IT COMPARES

Each dot is one country with a page on aloeenergy.org; the line marks the median. Positions only, no ranking.
