COUNTRY BRIEF · NOVEMBER 2026

Republic of the Congo: grid and electricity access

Mission 300 compact country

3.9 M
people live without night-time light, a proxy for no power

58%
of them live within 15 km of a power line

9,400
km of mapped and predicted power lines, all voltages

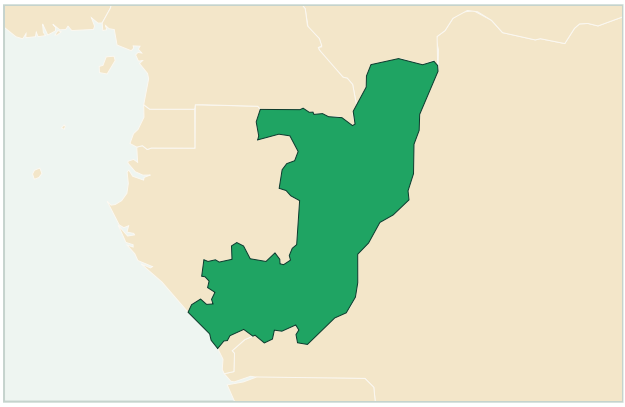

32%
electricity access, as stated in the compact

81%
access target in the Mission 300 compact (2030)

About 3.9 million people in the Republic of the Congo live where satellites see no electric light at night, and 58% of them live within 15 km of a power line. This page brings together what our grid-edge screening and the Republic of the Congo's Mission 300 energy compact say about who still needs power, how close the grid is and what the country has committed to.

WHAT THIS MEANS

1.6 million people without power live 2 to 15 km from a line: close enough to plan for the grid, too far for a quick connection.

NEAR THE GRID, NOT ON IT

About 3.9 million people in the Republic of the Congo, roughly 75% of the population, live where satellites see no electric light at night. Of them, 58% live within 15 km of a mapped or predicted power line: 660,000 within 2 km, 1.6 million 2 to 15 km away, and 1.7 million farther out. The largest group lives more than 15 km from any line, where standalone solar and mini-grids are the realistic first step for years to come.

Within 2 km of a line: **660,000** (17%)
2 to 15 km: **1.6 million** (41%)
More than 15 km: **1.7 million** (42%)

"Without night-time light" is a satellite proxy, not a measured access rate.

THE GRID TODAY

Gridfinder, which combines OpenStreetMap lines with medium-voltage lines predicted from night-time lights, maps about 9,434 km of existing and likely power lines in the Republic of the Congo. That includes lower-voltage distribution lines, so it is not comparable with the high-voltage totals on our grid-atlas country pages. We have not yet built a detailed grid atlas for this country.

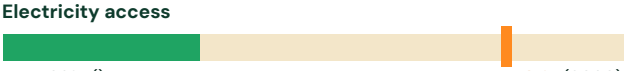

People without night-time light, by distance to a line

Distance	Million people	Share
Within 2 km of a line	0.66	17%
2 to 15 km	1.58	41%
More than 15 km	1.66	42%
Total	**3.90**	**100%**

MISSION 300 COMPACT

The Republic of the Congo's Mission 300 energy compact commits to raising electricity access from 32% to 81% by 2030. New access is planned as 0% grid, 10% mini-grids and 90% standalone solar.

Electricity access

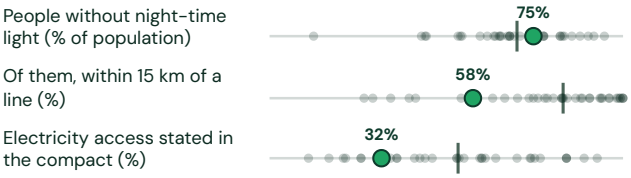

Now: **32%** () Target: **81%** (2030)

Mission 300 energy compact

Commitment	Value
Planned split of new access	grid 0%, mini-grids 10%, standalone solar 90%
Clean cooking target	from 40% to 81% by 2030
Private investment sought	US$1.437 billion
Rules for mini-grids when the grid arrives	Not stated
E-waste commitment	No

HOW IT COMPARES

Each dot is one country with a page on aloeenergy.org; the line marks the median. Positions only, no ranking.
