COUNTRY BRIEF · NOVEMBER 2026

The Gambia: grid and electricity access

Mission 300 compact country

1.4 M
people live without night-time light, a proxy for no power

70%
of them live within 15 km of a power line

500
km of mapped and predicted power lines, all voltages

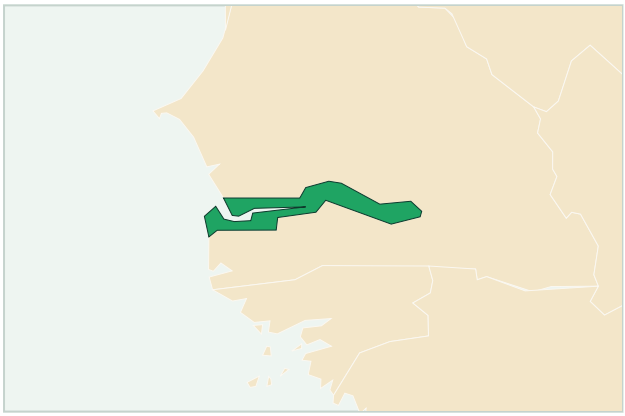

74%
electricity access, as stated in the compact (2024)

100%
access target in the Mission 300 compact (2030)

About 1.4 million people in the Gambia live where satellites see no electric light at night, and 70% of them live within 15 km of a power line. This page brings together what our grid-edge screening and the Gambia's Mission 300 energy compact say about who still needs power, how close the grid is and what the country has committed to.

WHAT THIS MEANS

To reach 100% electricity access by 2030, The Gambia needs to add about 4 percentage points a year from 2024: from 74% today.

NEAR THE GRID, NOT ON IT

About 1.4 million people in the Gambia, roughly 66% of the population, live where satellites see no electric light at night. Of them, 70% live within 15 km of a mapped or predicted power line: 532,000 within 2 km, 461,000 2 to 15 km away, and 422,000 farther out. The largest group lives within 2 km of a line, so the main gap is last-mile connections and affordability, more than new lines.

Within 2 km of a line: **532,000** (38%)
2 to 15 km: **461,000** (33%)
More than 15 km: **422,000** (30%)

"Without night-time light" is a satellite proxy, not a measured access rate.

THE GRID TODAY

Gridfinder, which combines OpenStreetMap lines with medium-voltage lines predicted from night-time lights, maps about 482 km of existing and likely power lines in the Gambia. That includes lower-voltage distribution lines, so it is not comparable with the high-voltage totals on our grid-atlas country pages. We have not yet built a detailed grid atlas for this country.

People without night-time light, by distance to a line

Distance	Million people	Share
Within 2 km of a line	0.53	38%
2 to 15 km	0.46	33%
More than 15 km	0.42	30%
Total	**1.42**	**100%**

MISSION 300 COMPACT

The Gambia's Mission 300 energy compact commits to raising electricity access from 74% to 100% by 2030.

Electricity access

Now: **74%** (2024) Target: **100%** (2030)

Mission 300 energy compact

Commitment	Value
Clean cooking target	from 25% to 50% by 2030
Private investment sought	US$0.247 billion
Rules for mini-grids when the grid arrives	Yes
E-waste commitment	No

HOW IT COMPARES

Each dot is one country with a page on aloeenergy.org; the line marks the median. Positions only, no ranking.
